Remediation Consulting

VERTEX provides management of environmental site assessment, subsurface investigations, and remediation services to address environmental impacts that may be identified at a property. Oftentimes, these services are prepared in conjunction with a Site Development Plan. Our expertise includes identifying the source and extent of soil and groundwater releases, and in subsurface investigations, supporting the selection and implementation of remedial response actions in compliance with federal, state and local regulations.

We've performed Natural Resource Damage Assessments (NRDA); environmental compliance and facility audits for real estate transactions; environmental claims oversight; ISO 14000 compliance and NEPA compliance; and the design and implementation of investigations and remedial activities at CERCLA and State/Local regulated sites.

VERTEX's highly qualified consultants have presented and communicated with all aspects of the environmental arena and are well versed in dealing with the needs of attorneys, bankers, regulators, and corporate executives. We focus on evaluating the deal structure and recommending the level of investigation or remediation necessary to ensure compliance while also meeting the business goals of our clients.
